

APP1064 - Inseq Barcode Generator (Web application) (UK Sites)

Web application that uses the Insequence labels and master data, together with function blocks which emulate the behaviour of Insequence dynamic data commands to produce a label featuring a part list and QR code that can be used as an assembly label, when a list of parts is selected. Not all commands supported. Originally developed for GPIRS assembly process to replace MS Access. Used for pre-build phases when part setup and label setup within Insequence has been completed. Custom development required because assessment was that Insequence would not be able to deliver the solution that was needed within a reasonable cost.
