

# APP1069 - ITS Email Robot (UK Sites)

Further interim development of the SCS recon emergency TLS process. Windows Service constantly monitors the jlr.sequencing email account and polls for new emails, removing the TLS sequencing attachments and placing them into the inbound location for the TLS JLR Offline Processor. This was assessed to save significant time in an emergency, and allowed for the management of the email queue. Further developments planned to integrate both applications and create "one button failover". Custom solution needed as would be cost prohibitive to utilise external provider, and solution is bespoke to the OEM and Plastic Omnium mail system.
